

August 01, 2010

Greetings:

In reading some of the comments on the last survey we sent out I came to realize that we do have many of the things people request already in LaserU but they may not be easily found. Please do not forget the Search feature. The search box is located in the upper right part of your screen after you log in. Enter in the term, such as, CerMark and it will pull up all the pages that the term appears.

Laser Spotlight

Each month we will showcase an item, product or skill from LaserU. We will give a summary of the item and provide links for more information. This month we will look at **Adding Color** from our Project Center.

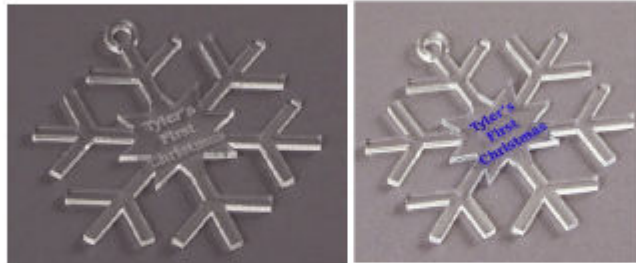

Expanding on the introduction above, I have created an item that appears in our Project Center and lists different ways to add color to your laser engraved projects. The catch is that all the content is already in LaserU.....just spread out. What this handout does is list the process (ex: Color Filling) and then it tells where to find out about it in LaserU and it also includes images for potential applications of the process.

One example is show below. The handout also includes information on CerMark (black & colors) for metal, glass & tile marking, foils, acrylic, mirrored acrylic, paper, shell laminates, LaserLIGHTS, FlexiBrass, WoodThins and more!

**C = Course, L = Lesson (C6L4 = Course 6 Lesson 4)

Process	Location	Possible Applications
Color Filling	C6L4 (Acrylic) C7L4 (Wood)	Acrylic & Wood

Available in many colors, including: red, blue, green, yellow, black, white, gold, purple and more.

For more information on the above, visit LaserU's **Project Center** and see Adding Color.

Please send questions and comments to laseru@laserbits.com

See you next month with our next **The Laser Engraver** Newsletter.
