## Optics Cleaning

Maintaining the optics on your laser system will increase productivity and quality. Laser optics are expensive to replace and using the correct cleaning materials is critical.

Our cleaner, tissues and dusting spray are designed for front surface mirrors and coated laser optics.

Blast away harmful dirt from the optics and motion system of your laser. Use the **Laser Optics Dusting Spray** (XUS 006) to remove debris prior to a final cleaning with the Laser Optics Cleaning Solution and Tissues.

**Laser Optics Cleaning Solution** (XUS 005) is the correct cleaner for coated optics and mirrors. Fully wet down the optics with this cleaner. It is industrial strength to remove harmful smoke residue and debris.

Finally, use **Laser Optics Cleaning Tissues** (XUS 004) to finish off your cleaning. Use light pressure and wipe across the surface in one direction, using a clean area of the tissue during your cleaning. This lintless product meets mil-spec and industrial standards for professional quality.
